## OSSERVAZIONI IDROMETRICHE GIORNALIERE

---

### SEGNI CONVENZIONALI E ABBREVIAZIONI

- I - Idrometro comune a lettura diretta
- Ir - Idrometrografo
- ? - Dato incerto
- » - Dato mancante
- asc - Idrometro all'asciutto

## CONTENUTO DELLE TABELLE IDROMETRICHE

---

Le osservazioni agli idrometri a lettura diretta vengono eseguite di norma a mezzogiorno; i numeri riportati corrispondono alle altezze in metri riferite allo zero.

Per le stazioni munite di apparecchi registratori si riporta analogamente l'altezza corrispondente al mezzogiorno dedotta dallo spoglio dei diagrammi.

I massimi mensili sono stampati in carattere **neretto**; i minimi in *corsivo*.

Nelle tabelle vengono riportati solo i risultati delle osservazioni eseguite agli idrometri più importanti, specialmente per ciò che riguarda la valutazione delle portate.

## Osservazioni idrometriche giornaliere

## AVVERTENZE

Il presente fascicolo contiene i risultati delle osservazioni pluviometriche e delle osservazioni idrometriche giornaliere compiute nelle stazioni dipendenti da questa Sezione, nell'anno 1921.

Detto materiale corrisponde alle schede pervenute da parte delle stazioni di osservazione, schede che formarono oggetto di accurata revisione da parte della Sezione, mentre fu sottoposto a continuo controllo il funzionamento delle stazioni.

Le osservazioni sono raccolte in tabelle mensili, nelle quali le stazioni sono raggruppate per bacini principali (con foce al mare).

Un secondo fascicolo di prossima pubblicazione col titolo « Bollettino Idrografico, II parte » conterrà insieme con brevi notizie sullo sviluppo del servizio nel corso dell'anno e coll'elenco generale delle stazioni di osservazione, i risultati di una prima elaborazione del materiale riportato nella prima parte, nonché gli elementi raccolti intorno alle precipitazioni nevose.

Nella seconda parte saranno riprodotti altresì i risultati delle misure di portata eseguite nel corso dell'anno, ed eventualmente i valori delle portate giornaliere per quelle stazioni per le quali gli elementi raccolti consentiranno il tracciamento di una scala di deflusso.

La II parte sarà infine corredata da una carta delle piogge annue, in base alla quale sono stati calcolati i volumi di afflusso meteorico annuo per i principali bacini imbriferi.

## CONTENUTO DELLE TABELLE PLUVIOMETRICHE

---

Nelle stazioni fornite di apparecchi a lettura diretta (pluviometri comuni e pluviometri) le osservazioni vengono eseguite ogni giorno nelle ore antimeridiane, generalmente alle 9. Per ogni giorno viene riportato il risultato della misura eseguita il giorno stesso; il numero segnato rappresenta quindi la quantità di precipitazione caduta nelle 24 ore che hanno preceduto la misura.

Analogamente, per le stazioni fornite di pluviografo si riporta per ogni giorno la quantità di pioggia che, dal diagramma, risulta caduta nelle 24 ore fra le 9 del giorno precedente e le 9 del giorno di cui si tratta.

Per quanto concerne infine gli osservatori meteorologici, questi ultimi trasmettono le tre misure eseguite una al mattino del giorno stesso e due nel pomeriggio del giorno precedente.

I quantitativi sono espressi in millimetri d'acqua. Con carattere **neretto** è stampato il massimo quantitativo giornaliero per ogni mese.

## Osservazioni pluviometriche giornaliere

Anno 1921 - Mese di Aprile
