1932 - ANNO X

# A. - METEOROLOGIA

## ANNOTAZIONI.

Le temperature medie sono calcolate con la formula:  $\frac{t^9 + t^{max} + t^{min} + t^{21}}{4}$

Sono stampati rispettivamente in **grassetto** ed in corsivo il valore massimo e minimo nel mese della temperatura media giornaliera.

I valori massimi e minimi delle temperature inviati dal Schweizerische Meteorologische Centralanstalt-Zürich per le stazioni: S. Gottardo, Airola, Faido, Grono, Comprovasco, Braggio, Locarno, Lugano, M. Generoso, non rappresentano i massimi e minimi assoluti, ma i massimi e minimi orari.

La forza del vento è indicata secondo la scala:

0 - Calma - Velocità oraria .....	Km. 0-7	2 - Moderato - Velocità oraria .....	Km. 14-29	4 - Forte - Velocità oraria .....	Km. 36-50
1 - Debole - » .....	» 7-14	3 - Quasi forte - » .....	» 29-36	5 - Tempesta - » .....	» 50-83
		6. - Uragano - Velocità oraria ....	Km. 83-108 ed oltre.		

Le osservazioni pluviometriche espresse in millimetri, sono effettuate alle ore 9 del mattino e assegnate al giorno stesso. Esse comprendono pioggia e neve fusa. — Le quantità di pioggia segnate in **grassetto** sono le massime giornaliere.

Nella colonna «strato di neve» viene segnata l'altezza dello strato nevoso sul suolo alla fine del mese.

Il segno » indica che mancano le osservazioni.

idem [...] indica il dato interpolato.

idem ? » incerto.

TAB. I. — Temperatura media.

(1) Totalizzatore a lettura annuale.

## B. - POTAMOLOGIA E LIMNOLOGIA

### ANNOTAZIONI.

I valori di piena e di magra ordinaria sono calcolati, per ciascuna serie idrometrica, dalla data di inizio delle osservazioni a tutto l'anno 1928 basandosi sul criterio di frequenza, ed ammettendo come ordinarietà dell'evento la frequenza del 75 per cento.

I valori delle altezze idrometriche corrispondono alle osservazioni effettuate alle ore 12 oppure alle medie giornaliere ricavate dai diagrammi dell'autoregistratore.

I valori di torbida e temperatura corrispondono alle osservazioni effettuate alle ore 12.

Il segno ▲ indica che la stazione è dotata dell'autoregistratore.

Il segno \*\* indica la massima altezza idrometrica.

id. \* id. la minima id. id.

id. [...] id. il dato interpolato.

id. ? id. incerto.

id. » id. che mancano le osservazioni.

È assunta come temperatura diurna dell'aria la semisomma delle temperature massima e minima di uno stesso giorno.

Le medie idrometriche relative al periodo 1901-1930, mentre si riferiscono al detto periodo per le stazioni a lungo funzionamento, si intendono limitate ad epoca più recente per le stazioni impiantate posteriormente al 1901.

[illegible]

(1) Livellazione Svizzera.

(\*\*) La spiaggia sulla quale è situato lo strumento va soggetta ad abbassamento.

(2) Per la stazione di Sesto Calende sono in corso misure che denotano variazioni nella scala delle portate; le conseguenti rettifiche verranno pubblicate nel 1932.

(1) Livellazione Svizzera.

(\*\*\*) La spiaggia sulla quale è situato lo strumento va soggetta ad abbassamenti.

(2) Per la stazione di Sesto Calende sono in corso misure che denotano variazioni nella scala delle portate; le conseguenti rettifiche verranno pubblicate nel 1932.

(1) Livellazione Svizzera.

(\*\*\*) La spiaggia sulla quale è situato lo strumento va soggetta ad abbassamenti.

(2) Per la stazione di Sesto Calende sono in corso misure che denotano variazioni nella scala delle portate; le conseguenti rettifiche verranno pubblicate nel 1932.

## C. - GEOIDROLOGIA

### ANNOTAZIONI.

Le osservazioni freatiche vengono effettuate alle ore 8 nei giorni 2 - 5 - 8 - 12 - 15 - 18 - 22 - 25 - 28 di ogni mese.

Le stazioni sono elencate per zone in relazione alla progressiva distanza dell'asse del Po.

Il segno » indica che mancano le osservazioni.

id. [...] id. il dato interpolato.

id. ? id. id. incerto.

I valori delle osservazioni freatiche riportati nelle tabelle che seguono, indicano la profondità del pelo d'acqua misurata da un caposaldo fissato presso l'orificio del pozzo, alto m. 0.80-1 sul piano di campagna.
