~ 1932 ~

Parte I. — OSSERVAZIONI

VOLUME I. — 1° SEMESTRE

ROMA
PROVVEDITORATO GENERALE DELLO STATO
LIBRERIA
1933 - ANNO XI

Il presente volume contiene gli elementi di osservazione raccolti nel primo semestre nell'anno 1932, relativi ai bacini del versante alpino a sinistra della Sesia.

Altri due volumi raccolgono gli analoghi elementi distintamente per il versante alpino in destra Sesia ed appenninico a monte dello sbocco della Scrivia (Sezione di Torino) e di quelli del versante appenninico dalla Scrivia al mare unitamente a tutto il corso principale del Po (Sezione di Parma).

Come di norma, ogni elaborazione degli elementi raccolti è esclusa in massima dal presente volume e viene compresa nel corrispondente volume della Parte II degli Annali; sono solamente indicate alcune prime ed elementari elaborazioni (medie, scostamenti della normale, ecc.) che servono a rendere possibile l'immediata utilizzazione dei dati di osservazione raccolti anche prima che venga pubblicata la parte II che necessità di studio costringono a ritardare.

In confronto a quello dell'anno precedente è stata introdotta la tabella dello « strato nevoso » che precedentemente veniva pubblicata nella seconda parte (Elaborazioni e Studi).

La raccolta dei dati e la pubblicazione del presente volume sono state effettuate a cura della Sezione di Milano.

*L'Ing. Capo del Genio Civile
Direttore dell'Ufficio Idrografico del Po
M. VISENTINI.*

A. - METEOROLOGIA

ANNOTAZIONI.

Le temperature medie sono calcolate con la formula: $\frac{t^{\circ} + t_{max} + t_{min} + t^{21}}{4}$

Sono stampati rispettivamente in **grassetto** ed in *corsivo* il valore massimo e minimo nel mese della temperatura media giornaliera.

I valori massimi e minimi delle temperature inviatici dal Schweizerische Meteorologische Centralanstalt-Zürich per le stazioni: S. Gottardo, Airolo, Faïdo, Grono, Comprovasco, Braggio, Locarno, Lugano, M. Generoso, non rappresentano i massimi e minimi assoluti, ma i massimi e minimi orari.

La forza del vento è indicata secondo la scala:

0 - Calma - Velocità oraria	Km. 0-7	2 - Moderato - Velocità oraria	Km. 14-29	4 - Forte - Velocità oraria	Km. 36-50
1 - Debole - "	" 7-14	3 - Quasi forte - "	" 29-36	5 - Tempesta - "	" 50-83
		6. - Uragano - Velocità oraria	Km. 83-108 ed oltre.		

Le osservazioni pluviometriche espresse in millimetri, sono effettuate alle ore 9 del mattino e assegnate al giorno stesso. Esse comprendono pioggia e neve fusa. -- Le quantità di pioggia segnate in **grassetto** sono le massime giornaliere.

Il segno » indica che mancano le osservazioni.

idem [...] indica il dato interpolato.

idem ? " incerto.

TAB. I. — Temperatura media.

B. - POTAMOLOGIA E LIMNOLOGIA

ANNOTAZIONI.

I valori di piena e di magra ordinaria sono calcolati, per ciascuna serie idrometrica, dalla data di inizio delle osservazioni a tutto l'anno 1928 basandosi sul criterio di frequenza, ed ammettendo come ordinarietà dell'evento la frequenza del 75 per cento.

I valori delle altezze idrometriche corrispondono alle osservazioni effettuate alle ore 12 oppure alle medie giornaliere ricavate dai diagrammi dell'autoregistratore.

I valori di torbida e temperatura corrispondono alle osservazioni effettuate alle ore 12.

Il segno Δ indica che la stazione è dotata dell'autoregistratore.

Il segno ** indica la massima altezza idrometrica.

id. * id. la minima id. id.

id. [...] id. il dato interpolato.

id. ? id. incerto.

id. » id. che mancano le osservazioni.

È assunta come temperatura diurna dell'aria la semisomma delle temperature massima e minima di uno stesso giorno.

Le medie idrometriche relative al periodo 1901-1931, mentre si riferiscono al detto periodo per le stazioni a lungo funzionamento, si intendono limitate ad epoca più recente per le stazioni impiantate posteriormente al 1901.

Osservazioni e rilievi in sezioni tipiche.

(*) Le caratteristiche si riferiscono al vecchio idrometro di Porta Verona; le osservazioni al registratore.

C. - GEOIDROLOGIA

ANNOTAZIONI.

Le osservazioni freatiche vengono effettuate alle ore 8, nei giorni 2 - 5 - 8 - 12 - 15 - 18 - 22 - 25 - 28 di ogni mese.

Le stazioni sono elencate per zone in relazione alla progressiva distanza dell'asse del Po.

Il segno » indica che mancano le osservazioni.

id. [...] id. il dato interpolato.

id. ? id. incerto.

I valori delle osservazioni freatiche riportati nelle tabelle che seguono, indicano la profondità del pelo d'acqua misurata da un caposaldo fissato presso l'orifizio del pozzo, alto m. 0.80-1 sul piano di campagna.
