

## b) - POTAMOLOGIA E LIMNOLOGIA

### SEGNI CONVENZIONALI

Dato mancante	»
Dato incerto	?
Dato interpolato	[ ]

I segni \*\* e \* posti vicino alle altezze idrometriche ed alle portate indicano rispettivamente i valori massimi e minimi del mese.

▽ Le quote così contrassegnate sono dedotte dalle carte dell'Istituto Geografico Militare e devono pertanto ritenersi approssimate.

### ANNOTAZIONI

I valori di magra e di piena ordinarie sono calcolati, per quelle stazioni che hanno una serie idrometrica di non meno di 15 anni di osservazioni, basandosi sul criterio di frequenza e ammettendo come ordinarietà dell'evento la frequenza del 75 per cento: essi sono aggiornati fino a tutto il 1930.

Le osservazioni agli idrometri a lettura diretta e quelle di torbida e temperature delle acque, i cui dati vengono riportati nelle tabelle, sono effettuate di norma alle ore 12; per le stazioni munite di idrometrografo viene parimenti riportata l'altezza corrispondente alle ore 12 deducendola dai diagrammi.

I valori delle portate medie giornaliere sono stati determinati, in genere, mediante la curva delle portate in base all'altezza osservata all'idrometro cui la curva stessa si riferisce: quando si è riconosciuta la necessità, a tali valori sono state apportate delle correzioni secondo il noto metodo di Stout. Per le stazioni fornite di registratore si è assunta, come portata giornaliera, di norma, la media dei valori corrispondenti ai livelli registrati di sei in sei ore; per i giorni in cui si sono verificate notevoli variazioni di livello la portata è stata determinata come media delle portate orarie. In tali casi naturalmente, la portata media giornaliera non corrisponde all'altezza idrometrica meridiana pubblicata per quel giorno.

Le altezze idrometriche riportate in carattere minuto fra quelle meridiane, rappresentano le altezze di colmo, verificatesi da un mezzogiorno all'altro, relative alle piene più interessanti.

Le temperature dell'aria sono date come media delle temperature massima e minima del giorno.

(1) Esclusi i deflussi dei canali derivati a monte, della portata media di circa mc/sec. 1.00. — (2) Lo zero dell'idrometro di Cesena è stato abbassato nel 1934 di m. 0,10. — (3) Esclusa la portata del Canale di S. Valentino (portata media di Marzo mc/sec. 9,25) e della bealera di Cantarana (portata media di Marzo mc/sec. 1,73) derivati a monte della sezione di misura. — (4) Esclusi i deflussi di un canale industriale derivato a monte (portata media di Marzo mc/sec. 0,70). — (5) Esclusi i deflussi di un canale industriale derivato a monte, della portata media di circa mc/sec. 0,340.

(1) Esclusi i deflussi dei canali derivati a monte, della portata media di circa mc/sec. 1.00. — (2) Lo zero dell'idrometro di Cesana è stato abbassato nel 1934 di m. 0.10. — (3) Esclusa la portata del Canale di S. Valentino (portata media di Aprile mc/sec. 9.27) e della bealera di Cantarana (portata media di Aprile mc/sec. 1.63) derivati a monte della sezione di misura. — (4) Esclusi i deflussi di un canale industriale derivato a monte (portata media di Aprile mc/sec. 0.64). — (5) Esclusi i deflussi di un canale industriale derivato a monte, della portata media di circa mc/sec. 0.340.

(1) Esclusi i deflussi dei canali derivati a monte, della portata media di circa mc/sec. 1.00. — (2) Lo zero dell'idrometro di Cesana è stato abbassato nel 1934 di m. 0.10. — (3) Esclusa la portata del Canale di S. Valeriano (portata media di Maggio mc/sec. 10.98) e della bealera di Cantarana (portata media di Maggio mc/sec. 0.64) derivati a monte della sezione di misura. — (4) Esclusi i deflussi di un canale industriale derivato a monte (portata media di Maggio mc/sec. 0.56). — (5) Esclusi i deflussi di un canale industriale derivato a monte, della portata media di circa mc/sec. 0.340.

(1) Esclusi i deflussi dei canali derivati a monte, della portata media di circa mc/sec. 1.00. — (2) Lo zero dell'idrometro di Cesana è stato abbassato nel 1934 di m. 0.10. — (3) Esclusa la portata del Canale di S. Valeriano (portata media di Luglio mc/sec. 9.23) e della bealera di Cantarana (portata media di Luglio mc/sec. 1.95) derivati a monte della sezione di misura. — (4) Esclusi i deflussi di un canale industriale derivato a monte, della portata media di circa mc/sec. 0.340.

(1) Massima piena assoluta m. 6,09 il 14 ottobre 1839. — (2) Massima piena assoluta m. 5,80 il 17. ottobre 1839.

(1) Esclusi i deflussi dei canali derivati a monte, della portata media di circa mc/sec. 1.00. — (2) Lo zero dell'idrometro di Cesana è stato abbassato nel 1934 di m. 0,10. — (3) Esclusa la portata del Canale di S. Valeriano (portata media di Settembre mc/sec. 10,19) e della bealera di Cantarana (portata media di Settembre mc/sec. 2,14) derivati a monte della sezione di misura. — (4) Esclusi i deflussi di un canale industriale derivato a monte (portata media di Settembre mc/sec. 0,64). — (5) Esclusi i deflussi di un canale industriale derivato a monte, della portata media di circa mc/sec. 0,340.

(1) Esclusi i deflussi dei canali derivati a monte, della portata media di circa mc/sec. 1.00. — (2) Lo zero dell'idrometro di Cesena è stato abbassato nel 1934 di m. 0,10. — (3) Esclusa la portata del Canale di S. Valeriano (portata media di Novembre mc/sec. 9,19) e della bealera di Cantarana (portata media di Novembre mc/sec. 1,64) derivati a monte della sezione di misura. — (4) Esclusi i deflussi di un canale industriale derivato a monte (portata media di Novembre mc/sec. 0,720). — (5) Esclusi i deflussi di un canale industriale derivato a monte, della portata media di circa mc/sec. 0,340.

### SEGNI CONVENZIONALI

Dato mancante . . . . .  
Dato incerto . . . . .  
Dato interpolato . . . . .[]

### ANNOTAZIONI

Le osservazioni ai pozzi vengono effettuate nei giorni 2, 5, 8, 12, 15, 18, 22, 25, 28 di ogni mese, al mattino prima che vengano effettuati forti attingimenti di acqua.

I valori delle altezze di livello freatico sono riferiti al livello medio del mare: sono stampati in **grassetto** i massimi ed in *corsivo* i minimi.
