Note - The dates on the stations of the Po basin falling in the territory of Switzerland are communicated by the Zurich Central Office of Meteorology.

SEGNI CONVENZIONALI ED ABBREVIAZIONI

Termometro	Tm	Igrografo	Ir
Termografo	Tr	Anemometro	A
Pluviometro	P	Anemografo	Ar
Pluvionivometro	Pn	Eliofanografo	Er
Pluviografo	Pr	Dato incerto	?
Pluviometro totalizzatore	Pt	Dato mancante	»
Barometro	B	Dato interpolato	[ ]
Barografo	Br	Dato nullo	—

I numeri scritti in **grassetto** ed in *corsivo sottolineato* corrispondono rispettivamente ai valori **massimo** e *minimo* verificatisi in un determinato periodo.

In tutte le tabelle del presente volume le stazioni sono raggruppate per bacini principali, e nelle tabelle 7, 8 e 9 per bacini secondari; in ciascun bacino le stazioni si seguono secondo l'ordine di sbocco da monte a valle degli affluenti, e per ciascuno di essi in ordine d'altezza sul livello del mare.

CONTENUTO DELLE TABELLE

Tabella 1. - Riporta, per alcune località principali fornite di osservatorio la **pressione atmosferica** letta alle ore 8 e ridotta allo 0°, espressa in millimetri.

Tabella 2. - Riporta, per le medesime località, la **direzione dominante** e la **velocità media del vento** nelle 24 ore, indicata quest'ultima in gradi secondo la scala seguente:

0 = Calma	velocità oraria Km.	0	—	7
1 = Debole	» » »	7	—	14
2 = Moderato	» » »	14	—	29
3 = Quasi forte	» » »	29	—	36
4 = Forte	» » »	36	—	50
5 = Tempesta	» » »	50	—	83
6 = Uragano	» » »	83	ed	oltre

Tabella 3. - Riporta, per le medesime località, lo **stato medio del cielo** risultante dalle tre letture giornaliere delle ore 8, 14, 19 espresso in decimi.

Tabella 4. - Riporta, per le medesime località, la **temperatura media giornaliera** calcolata col diagramma termografico oppure nel modo seguente:

$$T_{media} = \frac{T^{mass.} + T^{min.} + T^{h.\ 8} + T^{h.\ 19}}{4}$$

Tabella 5. - Riporta per le medesime località:

a) le medie mensili ed annue delle massime e delle minime temperature osservate giornalmente, e le medie mensili ed annue delle temperature medie giornaliere (1):

b) le temperature estreme (massima e minima) osservate in ogni mese e nell'anno, ed il giorno nel quale esse si sono verificate;

c) i seguenti valori della escursione di temperatura: massima e media giornaliera per ogni mese e per l'anno; massima mensile ed annuale (differenza fra le temperature estreme del periodo);

d) la frequenza in giorni per i singoli mesi e per l'anno, delle temperature medie giornaliere, dividendo il campo di escursione della temperatura in sei intervalli.

Tabella 6. - Riporta le **temperature massima e minima giornaliere** relative ad alcune stazioni tipiche per i vari bacini idrografici, fornite di termometro a massima e minima. Le osservazioni vengono effettuate alle ore 8 antimeridiane. Il valore letto per la temperatura massima, viene assegnato al giorno precedente; quello della temperatura minima viene invece assegnato al giorno stesso della osservazione. Nell'ultima riga è indicata la temperatura media del mese.

Le temperature sono espresse in centigradi e corrispondono sempre alle letture effettivamente eseguite, senza alcuna correzione.

Tabella 7. - Comprende per tutte le stazioni pluviometriche del bacino: l'altezza sul livello del mare, il tipo dell'apparecchio, i valori delle **precipitazioni giornaliere**

1) Indicate nella tabella come temperature medie.

decadiche e mensili ed inoltre il numero dei giorni piovosi nel mese, considerando come tali quelli nei quali è stata misurata un'altezza di precipitazione non inferiore ad un millimetro.

Nelle stazioni fornite di apparecchi con misura diretta (pluviometri e pluvionivometri) le osservazioni vengono eseguite ogni giorno generalmente alle ore 8, ed il risultato viene attribuito al giorno stesso; il numero segnato rappresenta quindi la quantità di precipitazione caduta nelle 24 ore che hanno preceduto la misura. Analogamente, per le stazioni fornite di pluviografo, o nelle quali si fanno più osservazioni giornaliere, si riporta per ogni giorno la quantità di pioggia che risulta caduta nelle 24 ore precedenti le ore 8 del giorno a cui è assegnata la precipitazione.

Sono comprese in questa tabella (con i valori mensili) anche quelle stazioni munite di pluviometro totalizzatore nelle quali si effettua regolarmente la lettura alla fine di ciascun mese.

Le quantità di precipitazione sono espresse in millimetri di altezza d'acqua, e comprendono pioggia e neve fusa.

Tabella 8. - Comprende le stazioni munite di pluviometro totalizzatore, per le quali le letture non possono essere eseguite regolarmente alla fine di ciascun mese, e riporta per ciascuna stazione, la data delle letture effettuate, i valori delle precipitazioni risultanti negli intervalli fra le successive letture, ed infine il totale dell'intero periodo. Le quantità di precipitazione sono espresse in millimetri di altezza d'acqua e comprendono pioggia e neve fusa.

Tabella 9. - Riporta, per tutte le stazioni pluviometriche della tab. 7: i **totali mensili, stagionali ed annui** delle precipitazioni e del numero dei giorni piovosi; il valore medio annuo della altezza di precipitazione, per un periodo di anni precedenti di funzionamento di cui è dato il numero, con un minimo di anni 5, ed escluso l'eventuale periodo anteriore al 1915; lo scostamento fra questo valore medio ed il totale misurato nell'anno.

Il valore stagionale dell'inverno è formato coi valori del mese di dicembre dell'anno precedente e dei primi due mesi dell'anno.

Tabella 10. - Riporta per alcune stazioni, la **ripartizione dei giorni piovosi in relazione alle entità delle precipitazioni misurate,** divise in sei gruppi. È inoltre indicato nella prima colonna il numero dei giorni con precipitazione inferiore ad un millimetro.

Tabella 11. - Riporta, per alcune stazioni tipiche, le **precipitazioni di massima intensità,** ossia i dati relativi ai più elevati valori registrati nell'anno in ciascuna stazione per le precipitazioni di 1, 3, 6, 12, 24 ore consecutive.

Tabella 12. - Riporta la data, la durata ed il valore delle **precipitazioni di notevole intensità** (non inferiore in ragguaglio a 60 mm. orari) e di **breve durata** (non superiore ad un'ora) registrate da alcune stazioni tipiche fornite di pluviografo.

La tabella fornisce inoltre per ciascun caso la intensità media di precipitazione ragguagliata al periodo di un'ora.

Tabella 13. - Riporta per alcune stazioni tipiche, l'indicazione e la durata in giorni dei tre periodi di tempo più lunghi nei quali non sono state misurate precipitazioni, e le durate delle due coppie di periodi più lunghi nei quali le precipitazioni complessive non hanno superato complessivamente mm. 15 e mm. 45.

Sono considerati solo e tutti i periodi il cui inizio cade entro l'anno.

Tabella 14. - Riporta, per determinate stazioni, e per ciascuno dei mesi da gennaio a giugno e da settembre a dicembre, nei quali possono verificarsi precipitazioni nevose: le altezze in centimetri dello strato nevoso sul suolo nell'ultimo giorno delle tre decadi mensili; il numero dei giorni nei quali si sono verificate precipitazioni nevose; il numero complessivo dei giorni di permanenza della neve sul suolo.

Tabella 15. - Riporta, per le medesime stazioni della precedente tabella, i **periodi continui di permanenza della neve sul suolo,** indicando per ciascuno: le date dell'inizio e del termine, la durata in giorni, l'altezza massima dello strato nevoso espressa in centimetri ed il giorno in cui si è verificata, infine l'altezza media nel periodo.

Sono contrassegnati con un asterisco (*) i periodi che si sono iniziati nell'anno precedente o che proseguono in quello seguente.

Tabella 16. - Comprende l'**elenco delle stazioni meteorologiche** di cui l'Ufficio raccoglie i dati, distinguendo quelle di cui si effettua la pubblicazione da quelle i cui dati vengono solamente conservati. Per ogni stazione sono indidati, fra altro, gli apparecchi in funzione ed i valori caratteristici delle precipitazioni annua e giornaliera.

SIGNES CONVENTIONNELS ET ABBREVIATIONS

Thermomètre	Tm	Hygrographe	Ir
Thermographe	Tr	Anémomètre	A
Pluviomètre	P	Anémographe	Ar
Pluvionivomètre	Pn	Héliophanographe	Er
Pluviographe	Pr	Donnée incertaine	?
Pluviomètre totalisateur	Pt	Donnée manquante	»
Baromètre	B	Donnée interpolée	[ ]
Barographe	Br	Donnée nulle	—

Les chiffres imprimés **en caractères gras** ou *italiques soulignés* correspondent aux valeurs **maximum** et *minimum* respectivement se vérifiant dans une période déterminée.

Dans toutes les tables de ce volume, les stations sont groupées par bassins principaux et dans les tables 7, 8 et 9 par bassins secondaires; dans chaque bassin les stations se suivent dans l'ordre de débouché d'amont en aval des affluents et pour chacun d'eux suivant l'ordre de hauteur sur le niveau de la mer.

CONTENU DES TABLES

Table 1. - Indique, pour quelques lieux principaux munis d'observatoire, la **pression atmosphérique,** lue à 8 heures et réduite à O°, exprimée en millimètres.

Table 2. - Indique, pour les mêmes lieux, la **direction dominante** et la **vitesse moyenne du vent** dans les 24 heures: cette dernière est donnée en degrés selon l'échelle suivante:

0 — calme	vitesse horaire	Km.	0 —	7
1 — faible	„	„	7 —	14
2 — modérée	„	„	14 —	29
3 — presque grande	„	„	29 —	36
4 — grande	„	„	36 —	50
5 — orage	„	„	50 —	83
6 — ouragan	„	„	83 et	plus.

Table 3. - Indique, pour les mêmes lieux, l'**état moyen du ciel,** résultant des trois lectures journalières à 8, 14, 19 heures, exprimé en dixièmes.

Table 4. - Indique, pour les mêmes lieux, la **température moyenne journalière,** calculée à l'aide du diagramme thermographique ou de la manière suivante:

$$T_{moyenne} = \frac{T^{max.} + T^{min.} + T^{h\,8} + T^{h\,19}}{4}$$

Table 5. - Indique, pour les mêmes lieux:

a) les moyennes mensuelles et annuelles de températures maximum et minimum observée chaque jour et les moyennes mensuelles et annuelles des températures moyennes journalières (1);

b) les températures extrêmes (maximum et minimum) observée chaque mois et pendant toute l'année, et le jour dans lequel elles se sont vérifiées;

c) les valeurs suivantes de l'excursion de la température: maximum et moyenne journalière pour chaque mois et pour l'année; maximum mensuelle et annuelle (différence entre les températures extrêmes de la période);

d) la fréquence en jours, pour les différents mois et pour l'année, des températures moyennes journalières, en divisant le champ d'excursion de la température en six intervalles.

Table 6. - Indique les **températures maximum et minimum journalières,** relatives à quelques station typiques des différents bassins hydrographiques, munies de termomètre à maxima et minima. Les observations sont effectuées à 8 heures du matin. La valeur lue pour la température maximum est attribuée au jour précédent; celle de la température minimum est par contre attribuée au jour même de l'observation. La température moyenne du mois est donnée à la dernière ligne.

Les températures sont exprimées en centigrades et correspondent toujours aux lectures effectuées sans aucune correction.

(1) Indiquées sur a table comme températures moyennes.

Table 7. - Comprend, pour toutes les stations pluviomètriques du bassin, la hauteur sur le niveau de la mer, le type de l'appareil, les valeurs des **précipitations journalières, décadaires et mensuelles,** aussi que le nombre des jours pluvieux du mois, étant considérés tels ceux dans lesquels on a mesuré une hauteur de précipitation non inférieure à un millimètre.

Dans les stations munies d'appareil à mesure directe (pluviomètres et pluvionimètres), les observations sont effectuées chaque jour en général à 8 heures, et le résultat est attribué au même jour; le chiffre donné rapprésente donc la quantité de précipitation tombée dans les 24 heures qui précédent la mesure. Analoguement, pour les stations munies de pluviographe, ou dans lesquelles on fait plusieurs observations journalières, on marque chaque jour la quantité de pluie tombée dans les 24 heures précédant les 8 heures du jour auquel on attribue la précipitation.

Dans cette table (par les valeurs mensuelles) sont comprises également les stations munies de pluviomètre totalisateur, dans lesquelles on effectue régulièrement la lecture à la fin de chaque mois.

Les quantités de précipitation sont exprimées en millimètres de hauteur d'eau et comprennent la pluie et la neige fondue.

Table 8. - Comprend les stations munies de pluviomètre totalisateur, pour lesquelles les lectures ne peuvent être effectuées régulièrement à la fin de chaque mois et donne pour chaque station: le jour des lectures effectuées, les valeurs des précipitations résultant dans les intervalles entre les lectures successives et enfin le total de toute la période. Les quantités de précipitation sont exprimées en millimètres de hauteur d'eau et comprennent la pluie et la neige fondue.

Table 9. - Indique, pour toutes les stations pluviomètriques de la table 7: les **totaux mensuels, saisonniers et annuels** des précipitations et du nombre des jours pluvieux; la valeur moyenne annuelle de la hauteur de précipitation pour une période d'années précédentes de fonctionnement, dont le nombre est donné, avec un minimum de 5 années, à l'exclusion de la période éventuelle antérieure au 1915; l'écart entre cette valeur moyenne et le total mesurè dans l'année.

La valeur saisonnaire de l'hiver est formée par les valeurs du mois de décembre de l'année précédente et des deux premier mois de l'année.

Table 10. - Indique, pour quelques stations, la **répartition des jours pluvieux en rélation à la quantité des précipitations mesurées,** divisées en six groupes. La première colonne indique aussi le nombre des jours ayant une précipitation inférieure à un millimètre.

Table 11. - Indique, pour quelques stations typiques, les **précipitations d'intensité maximum,** c'est-à-dire les données rélatives aux valeurs plus élevées enregistrées dans l'année à chaque station pour les précipitations de 1, 3, 6, 12, 24 heures consécutives

Table 12. - Indique la date, la durée et la valeur des **précipitations d'intensité considérable** (non inférieure comparativement à 60 mm. horaires) et **de faible durée** (ne dépassant pas 1 heure) enregistrées par quelques stations typiques, munies de pluviographe.

La table donne aussi pour chaque cas l'intensité moyenne de précipitation, referée à une période d'une heure.

Table 13. - Donne, pour quelques stations typiques, l'indication et la durée en jours des trois périodes de temps plus longues, pendant lesquelles on n'a pas mesuré des précipitations, et la durée des deux paires de périodes plus longues, dans lesquelles les precipitations n'ont pas dépassé en total 15 et 45 mm.

On a considéré seulement et toutes les périodes dont le commencement tombe dans l'année.

Table 14. - Indique, pour des stations déterminées et pour chacun des mois de janvier à juin et de septembre à décembre, pendant lesquels des précipitations neigeuses peuvent avoir lieu: la hauteur en centimétres de la couche neigeuse sur le sol, au dernier jour des trois décades mensuelles, le nombre des jours dans lesquels des précipitations neigeuses ont eu lieu; le nombre total des jours de permanence de la neige sur le sol.

Table 15. - Indique, pour les mêmes stations de la table précédente, les **périodes continuelles de permenence de la neige sur le sol,** en indiquant pour chacune d'elles: les dates du commencement et de la fin, la durée en jours, la hauteur maximum de la couche neigeuse exprimée en centimètres, le jour où elle s'est vérifiée,

On a marqué par un astérisque (*) les périodes qui ont commencé dans l'année précédente, ou qui continuent das la suivante.

Table 16. - Comprend la **liste des stations météorologiques** dont le Bureau recueille les données, en distinguant celles dont on effectue la pubblication et celles dont on conserve simplement les données. Pour chaque station sont indiqués, entre autres, les appareils en fonction et les valeurs caractéristiques de la précipitation annuelle et de la précipitation journalière.

ERKLÄRUNG DER ZEICHEN UND ABKÜRZUNGEN

Thermometer	Tm	Registrierender Feuchtigkeitsmesser	Ir
Temperaturschreiber	Tr	Windmesser	A
Regenmesser	P	Registrierender Windmesser	Ar
Regen und Schneemesser	Pn	Registrierender Sonnenlichtmesser	Er
Registrierender Regenmesser	Pr	Unsicherer Wert	?

Registrierender Barometer	Br	Nullwert	—

Die **fett** und *Schrägschrift unterstrichen* gedrückten Werte entsprechen dem **Höchstwert** bzw. dem *Mindestwert,* wie sie sich in einem bestimmten Zeitabschnitt ergeben haben.

In allen Tabellen dieses Bandes sind die Stationen nach Hauptgebiet, und in den Tabellen 7, 8 und 9 nach Nebengebiet geordnet; innerhalb jedes Gebiets folgen die Stationen talwärts in der Reihenfolge Züflusse, und bei den einzelnen derselben in der Reihenfolge ihrer Höhelange ü. M.

INHALT DER TABELLEN

Tabelle 1. - Gibt für die wichtigsten Orte mit Observatorium den **Luftdruck,** um 8 Uhr abgelesen und auf O° umgerechnet an.

Tabelle 2. - Gibt für die gleichen Orte die **hauptsächliche Richtung** und die **mittlere Geschwindigkeit des Windes** innerhalb 24 Stunden an wobei die Windgeschwindigkeit in Stufen nach folgender Aufstellung bezeichnet ist:

0 — ruhig	Stundengeschwindigkeit	Km.	0	— 7
1 — schwach	„	„	„ 7	— 14
2 — mässig	„	„	„ 14	— 29
3 — ziemlich stark	„	„	„ 29	— 36
4 — stark	„	„	„ 36	— 50
5 — sturm	„	„	„ 50	— 83
6 — orkan	„	„	„ 83	u. mehr.

Tabelle 3. - Gibt für die gleichen Orte den **mittleren Bewölkungszustand** aus dreitäglichen Messungen um 8, 14 und 19 Uhr in Zehnteln an.

Tabelle 4. - Gibt für die gleichen Orte die **mittlere Tagestemperatur** an, welche mit dem von Temperaturschreiber registrierten Diagramm oder nach folgender Formel berechnet ist:

$$T_{Mittl.} = \frac{T^{max} + T^{min.} + T^{u.\,8} + T^{u.\,19}}{4}$$

Tabelle 5. - Gigt für die gleichen Orte:

a) die monatlichen und jährlichen Mittelwerte der täglich festgestellten Höchst und Mindesttemperaturen und die monatlichen und Jährlichen Mittelwerte der mittleren Tagestemperaturen (1);

b) die Temperaturgrenzwerte (Maximum und Minimum), die in jedem Monat und in Jahr beobachtet werden, und den Tag ihres Eintretens;

c) die folgenden Werte des Temperaturausschlages: höchster und mittlerer Tageswert für jeden Monat und für das Jahr, monatlicher und jährlicher Höchstwert (Unterschied zwischen den Temperaturgrenzwerten des betreffenden Zeitabschnittes);

d) die Häufigkeit in Tagen für die einzelnen Moriate und für das Jahr der mittleren Tagestemperaturen, unter Unterteilung des Temperatur-Diagrammfeldes in sechs Abschnitten.

Tabelle 6. - Gibt die **täglichen Höchst- und Mindesttemperaturen** für einige bezeichnende Stationen verschiedener hydrographischen Gebiet an, die mit Maximal - Minimal - Thermometer ausgerüstet sind. Die Messungen werden um 8 Uhr vormittags ausgeführt. Der für die Maximaltemperatur abgelesene Wert wird auf den vorangehenden Tag überschrieben, während die Minimaltemperatur auf dem Ablesetag verdleit. In der letzten Zeile ist die mittlere Monatstemperatur angegeben.

Die Temperaturen sind in Grad Celsius ausgedrückt und entsprechen stets den tatsächlichen Ablesungen, ohne Korrektur.

Tabelle 7. - Enthält für alle Regenmesstationen des Gebiets die Lage ü. M., den Apparattyp, den Wert der **täglichen, dekadischen und monatlichen Nieder-**

(1) In der Tabelle als mittlere Temperaturen bezeichnet.

schläge und ferner die Anzahl der Regentage im Monat, wobei als solche die Tage angesehen sind, an denen eine Niederschlagshöhe von nicht weniger als einem Millimeter gemessen ist.

Bei den Stationen, die mit Apparaten mit unmittelbarer Messung (Regenmesser und Schneeregenmesser) ausgerüstet sind, werden die Messungen in Allgemeinen täglich um 8 Uhr ausgeführt und das Ergebnis auf den gleichen Tag eingetragen. Die angegebene Zahl bedeutet daher die in 24 der Messung vorangegangenen Stunden erfolgten Niederschläge. In entsprechender Weise ist bei den Stationen mit registrierendem Regenmesser oder bei solchen, die mehrere Messungen täglich ausführen, diejenige Regenmenge für Jeden Tag eingetragen, welche in den der 8-Uhr Zeit des Eintragetages vorangegangenen 24 Stunden gefallen ist.

In dieser Tabelle sind mit ihren monatlichen Werten anch jene Stationen enthalten, welche einen addierenden Regenmesser haben, der regelmässig am Ende jedes Monats abgelesen wird.

Die Niederschlagsmengen sind in Millimeter Wasserhöhe eingetragen und umfassen Regen und geschmolzenen Schnee.

Tabelle 8. - Enthält die Stationen, welche mit einem addierenden Regenmesser versehen sind und bei denen die Ablesungen nicht regelmässig am Ende jedes Monates ausgeführt werden können. Es sind für jede Station das Datum der ausgeführten Ablesungen festgestellten Niederschläge und schliesslich der Gesamtbetrag für den ganzen Zeitabschnitt angegeben. Die Niederschlagmengen sind in Millimeter Wasserhöhe ausgedrückt und umfassen Regen und geschmolzenen Schnee.

Tabelle 9. - Gibt für alle Regenmesstationen nach Tabelle 7 an: die **monatlichen, jahreszeitlichen und jährlichen Gesamtwerte** der Niederschläge und der Anzahl der Regentage, den jährlichen Mittelwert der Niederschlagshöhe für einen Abschnitt von soviel vorangegangenen Betriebsjahren, wie angegeben, mit einen Minimum von 5 Jahren und unter Ausschluss des Zeitraumes vor 1915, den Unterschied zwischen diesem Mittelwert und dem im Jahre ermittelten Gesamtwert.

Der jahreszeitliche Wert für den Winter ist aus den Werten des Monats Dezember des vorangegangenen Jahres und der ersten beiden Monate des betreffenden Jahres gebildet.

Tabelle 10. - Gibt für einige Stationen die **Verteilung der Regentage nach gemessenen Niederschlagmengen** in sechs Gruppen zusammengesetz an. In der ersten Reihe ist fernerhin die Anzahl der Tage mit einer geringeren Niederschlagsmenge als 1 mm angegeben.

Tabelle 11. - Gibt für einige bezeichnende Stationen **besonders starke Niederschläge** an, d. h. Angaben betreffend die höchsten im Jahre bei jeder Station registrierten Werte für Niederschläge von 1, 3, 6, 12 und 24 Stunden hintereinander.

Tabelle 12. - Gibt das Datum, die Dauer und den Wert **erheblicher Niederschläge** (von nicht weniger durchschnittlich als 60 mm Std.) und **kurzer Dauer** (nicht mehr als eine Stunde) an, die von einigen bezeichnenden Stationen mit registrierenden Regenmesser aufgenommen sind.

Die tabelle gibt fernerhin für jeden Fall den mittleren Wert des Niedershlages auf eine Stunde bezogen an.

Tabelle 13. - Bringt für einige bezeichnenden Stationen die Angabe und die Dauer in Tagen von den drei längsten Zeitabschnitten, in denen keine Niederschläge gemessen wurden, und die Dauer je zwei längster Zeitabschnitte, in denen die Niederschläge einen Wert von insgesamt 15,bzw. 45 mm nicht überschritten haben.

Es sind nur die Zeitabschnitte berücksichtigt, deren Anfang in das Jahr fällt, diese aber alle.

Tabelle 14. - Gibt für bestimmte Stationen und fur jeden der Monate Januar bis Juni und September bis Dezember, in denen Schnee fallen kann, an: die Höhe in cm der Schneeschicht über dem Boden am letzten Tage der drei Dekaden des Monats, die Anzahl der Tage, an denen Schnee fiel und die Gesamtzahl der Tage, an denen Schnee auf den Boden lag.

Tabelle 15. - Gibt für die gleichen Stationen wie bie vorige Tabelle **durclaufende Zeitabschnitte mit liegengebliebenem Schnee** an, wobei für jeden vermerkt sind: die Daten des Anfanges und des Endes, die Dauer in Tagen, die Höchsthöhe der Schneeschicht in cm, die Tag, an welchem diese vorhanden war, und schliesslich die mittlere Höhe in dem Zeitabschnitt.

Mit einem (*) sind diejenigen Zeitabschnitte bezeichnet, welche im vorangegangenen Jahre begonnen haben oder in das folgende hinüberlaufen.

Tabelle 16. - Enthält das **Verzeichnis der meteorologischen Stationen** von denen das Amt die Angaben sammelt, unterschieden ist, zwischen solchen, deren Ergebnisse veröffentlicht und solchen, deren Ergebnisse nur gesammelt werden. Für jede Station sind u. a. die in Betrieb befindlichen Apparate un die bezeichnenden Werte für den Jährlichen und täglichen Niedersclag angegeben.

CONVENTIONAL SIGNS AND ABBREVIATIONS

All figures printed in **fat types** and *underlined Italics* correspond to the **maximum** and *minimum* values occurring in a determined period.

In all the tables of this volume the stations are grouped into principal basins and in tables 7, 8 and 9 into secondary basins: the stations follow each other in each basin as the affluents flow from source to outler and each of them in the order of heigh on the sea level.

CONTENTS OF THE TABLES

Table 1. - Shows, for some chief localities provided wit an Observatory the **atmospheric pressure** read at 8 in the morning reduced to O°, expressed in millimeters.

Table 2. - Shows, for the same localities, the **prevailing direction** and the **mean velocity of the wind** in 24 hours, the latter being indicated in degress according to the following scale:

0 — calm	velocity per hour Km.	0 — 7
1 — low	" " "	7 — 14
2 — moderate	" " "	14 — 29
3 — almost high	" " "	29 — 36
4 — high	" " "	36 — 50
5 — thunderstorm	" " "	50 — 83
6 — hurricane	" " "	83 and more

Table 3. - Shows, for the same localities, the **average appearance of the sky** resulting from three daily readings at 8, 14, 19 o' clock expressed in tenths.

Table 4 - Shows, for the same localities, the **average daily temperature** calculated by means of the thermographic diagram or in the following manner:

$$T_{mean} = \frac{T^{max.} + T^{min.} + T^{8\,h} + T^{19\,h}}{4}$$

Table 5. - Shows, for the same localities:

a) the monthly and annual mean temperature between maximum and minimum observed daily and the monthly and annual mean daily temperatures (1);

b) the extreme temperatures (maximum and minimum) observed in each month and the day in which they occurred;

c) the following values of the excursion of temperature: daily maximum and minumum for each month and for the year; monthly and annual maximum temperature (difference between the extreme temperatures of said period);

d) the day frequency in each month and in the year of the daily average temperature by dividing the excursion field in six intervals.

Table 6. - Shows the **daily maximum and minimum temperatures** of some typical stations for the various hydrographic basins provided with maximum and minumum thermometer.

The observation are made at 8 in the morning. The value read for the maximum temperature is attributed to the preceding day; the value of the minumum temperature is attributed to the same day of the observation. The average temperature of the month is given in the last line.

The temperatures are expressed in centigrades and agree always with the actual readings without any correction.

Table 7. - Comprises for all pluviometric stations of the basin: the height on the sea level, the type of the apparatus, the values of the **daily, decadal and monthly**

(1) Indicated on the tables as average temperatures.

precipitations and moreover the number of pluvious days in the month, considering as such those in wich a height of fall not less than 1 millimeter has been measured.

In the stations provided with direct measurement apparatus (raingauges and rain-snow-gauges), the observations are made each day generally at 8 in the morning and the result is attributed to the same day; the figure marked ehow thersfore the amount of precipitation in the 24 hours preceding the measurement. In the like manner the station equipped with a pluviograph or in wich a number of daily observations are made, the amount of rainfall in the 24 hours preceding 8 in the morning of the day to wich the precipitation is attributed is marked.

This table comprises (with the monthly values) also the stations provides with a totalising pluviometer, in wich reading is regurarly effected at the end of each month.

The amounts of precipitation are expressed in millimeters of height of water and include rain and melted snow.

Table 8. - Comprises the stations provided with a totalising pluviometer, for wich the readings cannot be effected regularly at the end of each month and shows for each station the day of reading, the amounts of the precipitations appearing in the intervals between successive readinge and finally the total of the entire period. The amounts of precipitation are expressed in millimeters of height of water and include rain and melted snow.

Table 9. - Shows, for all pluviometric station of table 7, the **monthly, seasonal and annual totals** of the precipitations and number of pluvious days, the average annual amount of the height of precipitation for a period of proceding years of operation the number of wich is given, with a minimum of 5 years with the exclusion of any period before 1915: the digression from said average value and the total mesaured in the year.

The winter seasonal amount is made up from the amounts of the mont. of december of the preeeding year and two first months of the eyar.

Table 10. - Shows for some stations the **distribution of pluvious days in respect of the amount of the measured precipitation** in six groups. The first column shows moreover the number of days with a precipitation below one milimeter.

Table 11. - Shows for some typical stations the **heaviest precipitations,** thal is to say the data relative to the highest amounts registered in the year in each station for rainfalls of 1, 3, 6, 12, 24 consecutive hours.

Table 12. - Shows the duration and amount of **capious precipitations** (not under 60 mm equallized per hour) and of short duration (not exceeding 1 hour) recorded by some typical stations provided with a pluviograph.

The table shows moreover in each case the average intensity of precipitation referred to 1 hour period.

Table 13. - Shows for some typical stations the three longer periods and their duration in days, in which no precipitation has been measured and the two couples of longer periods in which the precipitations did not exceded togeter 15 and 45 mm respectively.

Only the periods commencing whitin the year have been considered none of them excluded.

Table 14. - Shows, for certain stations and for each month from January to June and from September to December, in which snowfalls may occur, the height in centimeters of the snow bed an the ground on the last day of the three mont decades; the number of days in which snowfalls occurred, the total number of days of permanence of the snow on the ground.

Table 15. - Shows for the same stations of the preceding table the **continuous permanence periods of the snow on the ground** and for each of them: the day of beginning and end, the duration in days, the maximum height of the snow bed expressed in centimeters an the day in which it occurred, and finally the average height in said period.

The periods which began in the preceding year or are continuing in the following one are marked with an asterisk (*).

Table 16. - Comprises a **list of the meteorologic stations,** of which the data are collected by the Office, distinction being made between the stations of which the data are pubblished and those of which the data are merely kept. For each station are indicated, among other data, the apparatus in use and the charateristic amounts of the annual and daily precipitation.
