Sezione A - Termometria

1.1 Guida alla lettura e convenzioni

Abbreviazioni e segni convenzionali

Termometro in telemisura	RT
Dato mancante	»

Sono stampati in **grassetto** ed in *corsivo* rispettivamente i valori massimi ed i valori minimi.

Contenuto delle tabelle

I dati sono trasmessi da stazioni termopluviometriche automatiche fornite di un sistema di registrazione digitale dei dati di temperatura rilevati dal sensore. Il valore massimo e minimo assegnati al giorno si sono verificati dalle ore 0 alle ore 24 del giorno stesso. Le stazioni sono ordinate nelle tabelle secondo la rispettiva posizione idrografica. Le tabelle sono precedute dall'elenco e caratteristiche delle stazioni termometriche che hanno funzionato nell'anno. Sono stampate in corsivo le stazioni di cui non si pubblicano le osservazioni. I nomi racchiusi fra parentesi, che compaiono nell'elenco, si riferiscono ai sottobacini.

TABELLA I. - Sono riportati, per le stazioni che hanno regolarmente funzionato nell'anno, i valori massimi e minimi rilevati giornalmente, e le rispettive medie mensili, unitamente alla temperatura media del mese, dell'anno cui si riferiscono le osservazioni e del precedente periodo di osservazione.

TABELLA II. - Per le stazioni della tabella I sono riportate:

- le medie mensili ed annue delle massime e delle minime temperature osservate giornalmente e le medie mensili ed annue delle temperature diurne. Come temperatura diurna è assunto il valore della semisomma delle temperature massime e minime osservate in uno stesso giorno;
- le temperature estreme (massima e minima) osservate in ogni mese e nell'anno, ed il giorno nel quale sono state osservate. Tutte le temperature riportate sono espresse in gradi centigradi e corrispondono alle letture effettivamente eseguite, non essendosi effettuata la riduzione al livello del mare.

1.2 Consistenza della rete termometrica al 31 Dicembre 2025

Zona di altitudine (m)	RT
0-200	56
201-500	28
501-1000	63
1001-1500	19
oltre 1500	2
<i>totali</i>	168

Sezione B - Pluviometria

2.1 Guida alla lettura e convenzioni

Abbreviazioni e segni convenzionali

Pluviometro in telemisura	RP
Pluviometro riscaldato	*
Precipitazione nulla	-
Dato mancante	»
Dato cumulato	[

Sono stampati in **grassetto** ed in *corsivo* rispettivamente i valori massimi ed i valori minimi.

Terminologia

1. Altezza di precipitazione (mm): quoziente del volume di acqua raccolta nel pluviometro (compresa, eventualmente, la neve sciolta) per l'area della superficie orizzontale dell'imbuto raccoglitore.
2. Giorno piovoso: giorno in cui è stata misurata un'altezza di precipitazione uguale o superiore ad 1 mm.
3. Intensità media di precipitazione in un dato intervallo di tempo: quoziente dell'altezza di precipitazione nell'intervallo per la durata di questo.

Contenuto delle tabelle

Le tabelle sono precedute dall'elenco e caratteristiche delle stazioni di osservazione che hanno funzionato nell'anno. I valori delle precipitazioni riportati sono espressi in millimetri di acqua e comprendono pioggia e neve fusa.

TABELLA I - Riporta la quantità di pioggia caduta giornalmente registrata tra le ore 00 e le ore 24, i totali mensili ed annui della precipitazione e il numero dei giorni piovosi. In caso di precipitazione al pluviometro non riscaldato, riporta il dato cumulato per il periodo di presunto scioglimento nivale. In tal caso, non potendo attribuire la precipitazione a ciascun giorno del periodo considerato, il numero di giorni piovosi è riportato come dato mancante.

TABELLA II - Riporta i totali mensili ed annui delle quantità di precipitazione.

TABELLA III - Riporta i valori massimi delle precipitazioni verificatesi per 1, 3, 6, 12 e 24 ore consecutive appartenenti o no allo stesso giorno. Per le durate da 3 a 24 ore le altezze possono talvolta essere uguali a quelle di durata inferiore.

TABELLA IV - Riporta i valori massimi delle precipitazioni verificatesi per 1, 2, 3, 4 e 5 giorni consecutivi, appartenenti o no allo stesso mese. Per le durate da 2 a 5 giorni le altezze possono talvolta essere uguali a quelle di durata inferiore.

TABELLA V - Riporta il valore, la durata e la data delle precipitazioni di maggiore intensità e di breve durata registrate ai pluviometri, rispettivamente di durata pari a 15, 30 e 45 minuti. Per le durate di 30 e 45 minuti, le altezze possono talvolta essere uguali a quelle di durata inferiore.

TABELLA VI - Riporta per i mesi da gennaio a maggio e da ottobre a dicembre nei quali possono verificarsi precipitazioni nevose:

- a) le altezze, in centimetri, degli strati nevosi sul suolo presenti nell'ultimo giorno del mese;
- b) la quantità di neve, in cm, caduta nel mese;
- c) il numero dei giorni nei quali si sono avute precipitazioni nevose;
- d) il numero complessivo dei giorni di permanenza della neve sul suolo.
